

## RedisCache (railo.extension.io.cache.redis.RedisCache)

This is the Redis Cache implementation for Railo. This allows you to cache objects, primitives and queries in a Redis. This can be used as a cache.

Name	redisSessions
Storage	<input checked="" type="checkbox"/> Allow to use this cache as client/session storage.
Server Host	<div>10.0.4.4:6379</div> <div>Redis host and port</div>
Namespace	<div>railo:cache</div> <div>Keys namespace. Be sure that any cache use a unique namespace to avoid keys r clashing.</div>
Default	<div>Object</div> <div>Define the default cache connection for tempates (cfcache) and object (cacheGet, this connection is used when no cache name is explicit defined</div>
